

FIG. 1 is a schematic diagram of a satellite communication system 100. The system includes a satellite 110 and a plurality of ground stations 120 and 130. The ground stations 130 are arranged in a vertical column on the left, and the ground station 120 is located at the bottom right. The satellite 110 is positioned in the center right. Bidirectional arrows indicate communication links between the satellite 110 and the ground stations 120 and 130. Dashed lines connect the ground stations 130 in the column, suggesting a network or data path.
